These are TLC's recommended specifications. Sage's specifications are lower than those stated here as they are for a "single user environments" and also do not take into account that users are likely to be using other software (Outlook, Word etc) at the same time.

You must purchase one license of ACT! per user. All specifications above will support a ten user environment. For 25 users or more separate Web and Database servers are recommended. Customer registration and activation are required in order to use this software. Your system must meet the minimum system requirements. Technical support is not available (from Sage or TLC) for users who do not meet the minimum system requirements.
